

Factsheet

# It's your time to sign! Firmar.es

## Easy, cost-effective and legally valid

Do you often find yourself waiting for days (or even weeks) for a contract to be signed? Firmar.es completes digital processes straight away, allowing documents to be signed in minutes, not days.

### Print, scan, email...

Whenever a process requires a signature, organisations still often resort to paper. The sender prints out and mails a document by post; the recipient signs it by hand and sends it back. Even emailed documents often still need to be printed, signed, scanned and returned.

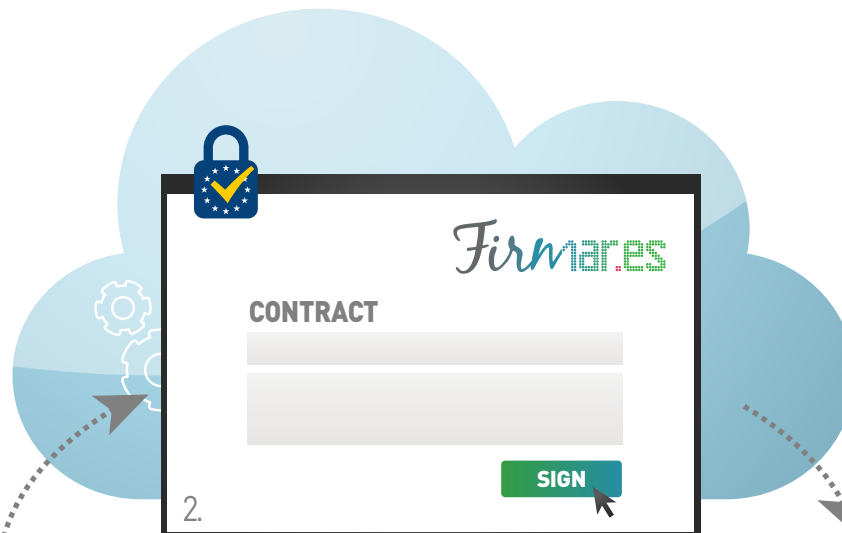

Not only is this procedure expensive and time-consuming, it also means that documents can be mistakenly left unsigned in a pile somewhere.

### Electronic signatures!

There's an easier way. Digital signatures allow documents to be signed fully electronically. Many organisations have already replaced the old-fashioned 'scrawl' with a digital signature that meets all the electronic signature requirements, making it equivalent to a signature on paper. Employment contracts, purchasing agreements, lease agreements, healthcare declarations, quotes, policies, construction drawings and other documents no longer need to be printed out, but can all be signed electronically.

### Firmar.es is the answer

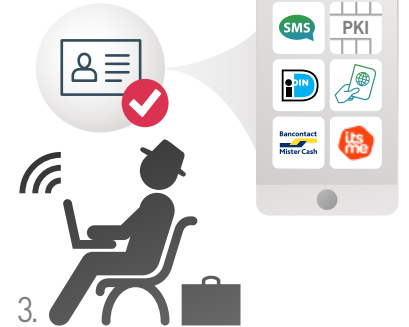

Firmar.es offers an easy, legally valid and cost-effective alternative to the traditional 'print, scan and post' procedure. The service allows documents to be signed quickly and easily, and with legal security. Firmar.es is a service by Evidos.

## How does Firmar.es work?

It's very easy; even bulk volumes can be signed with minimum effort.

### Step 1

- Upload your document to the Firmar.es portal, or to another application with Firmar.es integration.
- Select one or more addressees.
- Choose a verification method for establishing the identities of the relevant people. For example using phone number verification as authentication.

### Step 2

- Send the documents for signing.

### Step 3

- The addressees view the document, complete the identification process and sign it.
- Firmar.es verifies the identity and signature on the document.

### Step 4

- Firmar.es will then return the signed document and transaction receipt, which includes an audit trail of all steps taken during the signing process.

## Firmar.es is:

- **Easy.** Firmar.es means processes can be completed digitally anywhere, anytime. Whether you are closing a sale, hiring an employee or concluding a contract, you will never have to wait for a signature on paper again.
- **Cost-effective.** The costs of getting a paper document signed often rise to €3 or more. Using a digital signature can easily reduce this price by a factor of four, by eliminating unnecessary paper, admin or postage costs.
- **Legally valid.** The signature meets the eIDAS requirements for advanced electronic signatures. Firmar.es also provides ample forms of evidence; for every document signed, you are sent a receipt showing the audit trail of all the steps taken during the signing process. We also sign documents using an independent timestamp. Download our White Paper for more information on the legal validity of digital signatures.
- **International.** Firmar.es facilitates the signing of documents in English, German, French, Spanish, Italian, Polish, and other languages. Firmar.es also complies with the European eIDAS Regulation, as well as American and other legislation.

## Some of our satisfied customers

### Reliability is key

Firmar.es meets the stringent requirements of financial institutions, insurers and government organisations. The Chamber of Commerce, BNP Paribas and ABN AMRO have already entrusted their critical-process documents to us. Security is also monitored annually via independently conducted pen tests.

Firmar.es complies with the latest privacy legislation (including the GDPR), is ISO 27001-certified and DigiD-certified in accordance with IT security regulations for web applications, and meets the cloud requirements of the Dutch Central Bank.

The service is available 24/7, so our customers can sign documents day or night. We work according to a Service Level Agreement, and all customers have their own individual contact person.

### Partnership

Firmar.es works perfectly in tandem with cloud products. An accessible API and clear agreements will make a digital signature part of your business in no time – in your or your customers' own corporate style.

### Want to know more?

Want more information about our services, or about how digital signatures can help you and your organisation?
